Changing a fraction with a denominator of 10 into an equivalent fraction with a denominator of 100

Connect

Equivalent fractions - partition strategy

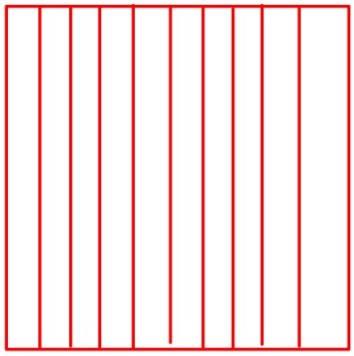
I do

Change 4/10 into an equivalent fraction with a denominator of 100

Sean has 7 dimes. How many pennies could he exchange them for?

We do

Change $3\frac{2}{10}$ into an equivalent fraction with a denominator of 100



Aliza has 2 dollars and 3 dimes. How much money does she have in dollars and pennies?

You do together on whiteboard

Write two equivalent fractions that represent what part of a dollar this represents - one with a denominator of 10 and one with a denominator of 100

You do alone on index card

Change $4\frac{8}{10}$ into an equivalent fraction with a denominator of 100
